

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (previously presented) A small dimension throwaway turbine device for the checking of breathing flux, characterized in only three components realized in one single printing and injection production phase out of plastic material, making use of always the same raw material, comprising:

a mono-block mobile equipment (2), configured to rotate about a rotation axis (5), formed exclusively of a plastic material; and

a turbo-turbine (4), with an inlet deflector (1) and an outlet deflector (3), the inlet deflector (1) and the outlet deflector (3) formed exclusively of the plastic material,

wherein the mobile equipment consists of one single piece of the plastic material formed as a blade (2), a first extension, and a second extension, the first and second extensions extending from opposite edges of the blade along the rotation axis (5).

2. (currently amended) The throwaway device according to claim 1,

wherein, opposite-facing ends of the first and second extensions each have a truncated-cone structure beveled with a 45° angle, and

wherein the inlet deflector (1) has a first cavity directly in said inlet deflector, the outlet deflector ~~(2)~~ (3) has a second cavity directly in said outlet deflector, and each of the first cavity and the second cavity are configured to house one of the first extension and the second extension.

3. (previously presented) The device according to claim 1, wherein said turbine is realized in one single production phase, making use of one single raw material.

4-5. (canceled)

6. (previously presented) The device according to claim 1,

wherein each of the inlet deflector (1) and the outlet deflector (3) are circular, and

wherein the rotation axis extends through a center of the inlet deflector (1) and the outlet deflector (3).

7. (previously presented) The device according to claim 2, wherein the rotation axis extends through a center of the inlet deflector (1) and the outlet deflector (3).

8. (currently amended) A turbine device for the checking of breathing flux, comprising:

a first ~~inlet~~ deflector (1);

a second ~~inlet~~ deflector ~~(2)~~ (3); and

a mono-block mobile equipment sandwiched between the first ~~inlet~~ deflector (1) and the second ~~inlet~~ deflector ~~(2)~~ (3), the mono-block mobile equipment consisting of a blade, a first extension extending from a first edge of the blade, and a second extension extending from an opposite second edge of the blade,

wherein the first ~~inlet~~ deflector (1), the second ~~inlet~~ deflector ~~(2)~~ (3), and the mono-block mobile equipment are ~~formed~~ made of a same plastic material and made exclusively only of [[a]] the same plastic material.

9-10. (canceled)
